SACRAMENTO AIRPORT

The new Terminal B opens four months early and comes in under budget

NATURAL DISASTERS

How can airports prepare themselves to cope with natural disasters safely and efficiently?

Custom Engineering, Italy

Custom Engineering offers a wide range of ticketing printers for the air transportation industry, including printers for boarding passes, bag tags, and self-service and info kiosks. The latest product to be developed by Custom is the Triple Feeder, which is used in desktop and self-service Custom printers. As the industry moves towards a new generation of slim kiosks, there is no space for three printers for printing boarding passes, bag tags and standard receipts. The Triple Feeder enables customers to manage all three in a single device.
